Why is my bootcamp drive called null?

It is because your bootcamp volume is not named. To name it, boot into windows and name your C:/ drive in "My Computer"

Does Flipside support NTFS-3G?

Yes it does!

How do I troubleshoot a problem?

A good way to troubleshoot is to check the Flipside log. To do so, launch the application, in the menu bar, click "Window" and then "View Log". Or you can use the keyboard shortcut command-L. The log contains information of the process of Flipside and may give you good insight on what is causing the issue.

What is the difference between regular reboot and fast reboot?

A regular reboot goes through Mac OS X normal restarting procedures attempting to quit each opened application. This can fail when you have unsaved work open. A fast reboot is a forced restart. This force quits all running applications and daemons. Choosing this option may result in loss of any data that is unsaved.
